Autonomous AI DBA Operations Platform — DBA Topics & Implementation Status

No.	DBA Area	Functionality Covered	Current Status
1	Database Connectivity & Administration	SQL Server connection setup, authentication, database access validation	Completed
2	Database Health Monitoring	CPU/session activity, database health checks, monitoring thresholds	Completed
3	Blocking & Session Management	Blocking sessions, SPID identification, lock waits, session analysis	Completed
4	Performance & Query Analysis	Long-running queries, wait statistics, performance analysis, AI recommendations	Completed / AI-assisted
5	Backup Monitoring	Backup history, status checks, alerts, approval-controlled backup workflows	Monitoring completed; execution simulated
6	SQL Server Agent Job Monitoring	Failed job detection, job history analysis, restart approval workflow	Monitoring completed; remediation workflow included
7	Database Space & Capacity Management	Database size, file growth, storage thresholds	Completed
8	Index & Statistics Maintenance	Fragmentation analysis, statistics checks, optimization recommendations	Monitoring/recommendation documented
9	Incident Management & RCA	Incident detection, severity assessment, AI-assisted root cause analysis	Completed
10	DBA Remediation & Automation	Remediation planning, approval workflow, controlled action execution	Approval workflow completed; Azure simulated
11	Database Security & Governance	Authentication, RBAC, approval/rejection, audit trails	Completed
12	DBA Reporting & Analytics	Excel health reports, incident reports, operational trends, audit reports	Completed; notifications simulated
